

Clear the Clutter. Connect to Care.

Digi's one rack-mounted solution replaces clutter and connects the lab to the cloud.

Challenge: Transforming Lab Data

A regional hospital upgrading its EMR and lab systems hit a roadblock — lab analyzers with serial-only data output couldn't connect to the cloud-based Electrical Medical Record (EMR). Multiple serial devices created cable chaos, and the hospital needed a centralized, scalable solution.

Solution: Effortless Lab Integration

Digi Connect® EZ and **Digi Remote Manager®** were introduced to simplify and modernize the lab's data flow.

- ➔ Replaced 9+ bulky standalone boxes with a sleek, single rack-mounted solution
- ➔ Seamlessly pushed serial data into the network, eliminating silos
- ➔ Provided centralized, clean control for the entire lab

Why it worked:

- ✓ Quick, hassle-free setup — no IT headaches
- ✓ Remote configuration and visibility with Digi Remote Manager
- ✓ Flexible, secure serial-to-Ethernet performance
- ✓ Outperformed competitor solutions in ease of use and management

Outcome: Optimized Lab Operations

Lab operations are now streamlined, with serial silos eliminated and seamless data flowing to the EMR — whether cloud-based or hosted on a local server — ensuring real-time access, centralized control, and enhanced collaboration across the lab. The result is a modern, seamless infrastructure that boosts productivity and gives medical professionals quicker, easier access to results as they happen.
