

Digi Accelerated Linux (DAL) Training

Digi SureLink®, Digi intelliFlow, Digi Containers, VPN tunnels, device security, tips, tricks and more

Wireless projects can be complex, but they don't have to be painful. Digi Professional Services can help maximize your device security and reliability and make your project deployment easier and faster by training your team on the DAL operating system and unlocking the full power of its capabilities. Our training includes integrated services like Digi SureLink and Digi intelliFlow, as well as Digi Remote Manager® value-added services like Digi Containers.

- ✓ **Customizable:** Our team will work to understand your application and use case for Digi's devices and not waste time training you on features and capabilities that aren't relevant. We will cover features and capabilities that you may not find or be aware of to better support your IT/OT teams.
- ✓ **Flexible:** Whether you have a team that needs basic troubleshooting knowledge, or a core team of deeply knowledgeable experts that need in-depth training on advanced topics — or both — we've got you covered. The hours dedicated to training are split up into multiple sessions and each session can be used in the way most advantageous to your team.
- ✓ **Experienced:** Our team has years of experience using Digi's devices, having helped teams deploy hundreds of thousands of cellular routers. We know and understand the critical features to expedite deployment, prevent downtime and maximize security, as well as how to address the most common issues networking teams experience. We will work to ensure your team has an understanding of how to mitigate those issues and resolve them as rapidly and as easily as possible when they do occur.

Here are some examples of the different topics that can be covered in training:

Networking

The DAL operating system has several features that help to increase the speed at which your devices connect to the cellular network, self-identify networking issues and take automated corrective or increase performance and reliability. These include:

- Digi SureLink® technology
- Router services (such as RIP, OSPF, BGP)
- Optimized cellular settings

Security

Digi's DAL operating system and Digi TrustFence® — Digi's security framework — provide several key features to help ensure your devices are secure. Learn to leverage those features to mitigate your security risks. Topics include:

- Securing your local device access
- Establishing single sign-on/multi-factor authentication capabilities
- Setting up VPN access

Add-on and advanced topics

There are additional capabilities that DAL supports that aren't available out of the box, but provide advanced high value capabilities.

- Digi WAN Bonding capabilities
- Digi intelliFlow®
- Digi Containers
