

Digi Modernizes Connectivity for the Food and Beverage Industry

Connectivity overhaul leads to improved workflow, savings, and growth.

Challenge

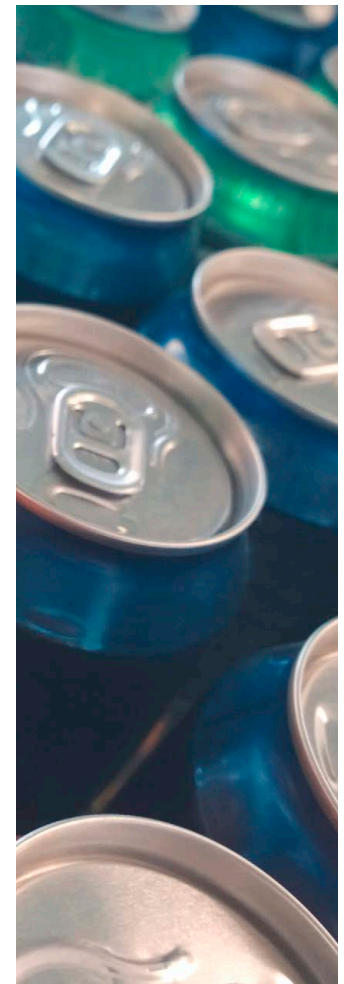

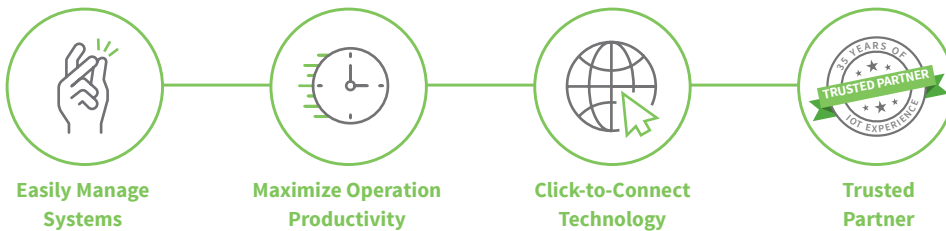

One of the largest multinational food, snack, and beverage corporations was experiencing network interruptions lasting up to 7 hours. They needed a solution to effectively connect their 21 distribution centers and decrease downtime.

Solution

As a trusted connectivity partner, Digi recognized the issue and offered an interface solution to modernize operations. By implementing the **Digi AnywhereUSB® 2 Plus**, they were able to connect USB devices remotely. With Digi AnywhereUSB 2 Plus, it's just a matter of clicking and you're connected!

Outcome

The system is now operating at higher productivity levels with less need for tech support. Through this infrastructure correction and improved efficiency, distribution has expanded — opening an average of two new distribution centers per year!
