Digi Navigator

Simplified Infrastructure Management

What Is Digi Navigator?

Digi Navigator™ is a software tool designed to streamline infrastructure management by simplifying the configuration, monitoring, and control of both new and legacy network devices. With an intuitive interface and robust features, it enhances operational efficiency by integrating modern and legacy systems seamlessly.

Key Features

User-friendly interface: Navigate and manage devices effortlessly.

Seamless device integration: Easily connect and manage both legacy and modern devices.

Quick IP configuration: Simplified setup for Digi Connect® EZ as well as older devices.

Efficient deployment: Copy and deploy Digi RealPort® configurations with ease.

Legacy-to-new conversion: Apply existing RealPort configurations to new hardware seamlessly.

Faster: Navigator is now smaller, easier to install and quicker to download. Additionally, it uses fewer system resources and allows users to see and manage more devices on one screen.

Benefits

- **Simplified device management:** Faster deployments with an intuitive interface.
- **Seamless transitions:** Effortlessly manage both old and new devices.
- **Efficient configurations:** Streamline large-scale deployments.
- **Reduced downtime:** Perform quick updates with minimal disruptions.
- **Cost-effective:** Reduce management costs with fewer manual interventions.

Why Use Digi Navigator?

- Centralized management for diverse devices
- Simplified IP and configuration processes
- Smooth transitions between legacy and modern systems
- Scalable, cost-effective solution for complex networks
