

# Digi Wireless Design Services

## Design and Engineering Services for Product Development

### Why Wireless Design Services?

**Getting IoT projects to market requires the right design and engineering team.**

Many companies struggle with how to define and implement their digital transformation. We design securely connected and cost-effective solutions to unlock the important insights necessary for increasing operational efficiency, reducing costs, enhancing service and most importantly increasing customer satisfaction.

#### Get to Market Faster

Digi Wireless Design Services (WDS) has a 15-year history of helping our clients speed down the path to success by guiding

them around the technological and regulatory certification pitfalls that spell disaster for budgets and product introductions.

We begin by actively listening to your business and technical requirements and then leverage our proven methodology, world-class engineering expertise, and library of proven IP to design a cost-effective solution that is tailored to your specific needs.

#### Digi Wireless Design Services

- Proof of concepts
- Architecture consultation
- Requirements definition
- System, software and electrical design
- Design reviews
- Certifications
- Prototype build
- Manufacturing test fixtures

#### OUR RECORD SPEAKS FOR ITSELF:

# 250+

### Product Development Projects

Our world-class engineers, RF lab, and library of proven IP make Digi WDS your trusted partner.

# 100%

### Compliance

Digi guarantees your product will comply with FCC/IC, cellular, and other requirements expediting your product plans.

# 100+

### Rescues

Digi is the go-to source to rescue an RF design from certification failure or suboptimal performance. We help you successfully meet your specifications and pass certifications.

# 100

### Million Devices

We help connect products in highly regulated industries around the globe.

Digi WDS is a dedicated team of creative engineers who take your products from concept to production

Digi WDS helps companies solve business problems by embedding wireless technologies to create innovative products. Partner with Digi WDS to:

- Decrease costs
- Increase revenues
- Accelerate time to market
- Generate new revenue streams

Internet of Things (IoT). Connected devices. Embedded systems. No matter what you call it, wireless technology and connected machines are becoming the eyes and ears of the home and enterprise.

Our proven methodology, project management and systems engineering takes you through a process where we first actively listen to your business and technical requirements. Then, based on these findings we design a solution that is tailored to your specific needs.

Accelerate toward the solution that is right for you and your customers. Contact Digi WDS to find out how we can help you be successful too.

“ Every promise Digi has made, they’ve delivered on – and that’s huge. They have reduced our risk, improved our product, and accelerated our timelines. You can’t ask for much more than that. ”

*Erich Hoefflerle, Engineering Manager - Evoqua*
