Enhancing Data Center Management Reliability and Efficiency

## Digi Connect® IT delivers speed and streamlines operations.

Challenge

A telecommunications company required a solution to ensure 24/7 uptime for mission-critical data centers associated with a fleet renewal project. Key to the project's success was the need for swift response to network errors while maintaining top-level security.

Solution

Utilizing integrated out-of-band management, Digi was once again selected to take on fleet optimization for this important system update. Implementing **Digi Connect® IT 16 and 48** solutions enabled the company to achieve faster response times, reduced downtime, and enhanced overall connectivity. This translated into substantial savings of over $11k compared to other solution providers.

Outcome

Leveraging Digi Connect IT solutions provides tangible operations benefits. Improving uptime and customer response not only ensures uninterrupted services for their customers but have also led to significant cost savings. The implementation of Digi's products resulted in improved efficiency, streamlined operations, and strengthened reliability for the company's critical infrastructure.
