

# HIGH-BANDWIDTH CONTINUITY FOR BRANCH NETWORKING

Enable complex network management and scalability for multiple locations

As IoT connectivity demands rapidly evolve, the number of network elements at retail locations has dramatically increased. As a result, the complexity of network installation and management requires reliable and redundant connections to accommodate higher bandwidth and maintain stable and secure high-speed communications.

Your branch network must support a range of devices, applications and peripherals to maintain point-of-sale terminals, digital signs and kiosks, even inventory tracking on a tablet. Reliable connectivity and business continuity are critical to sales, productivity and success in any retail networking environment.

## BUSINESS CONTINUITY

Eliminate downtime and keep all your operations running smoothly with Digi automated failover systems that maintain critical networks across high-bandwidth applications. As growing networks host more applications, service disruption can have broader consequences. Downtime costs such as lost sales and productivity add up quickly and negatively impact brand perception and reputation.

## BRING YOUR OWN NETWORK

Deploy primary and failover connectivity to any location quickly and seamlessly with integrated Digi hardware, zero-touch provisioning and cloud management. Rapidly expand and add dynamic flexibility for new branch locations, pop-up stores, stores-within-a-store and digital signage to meet your customer engagement and growth strategies.

Bring your own network to client or shared sites, and remotely switch between carriers for backup connectivity. Monitor connections, device and network health with real-time tracking and alerts across all locations with Digi Remote Manager® (DRM).

## SOFTWARE-DEFINED

Leveraging the power of the cloud, Software-Defined WAN (SD-WAN) adds redundancy and lets businesses scale bandwidth on demand. As operations expand geographically, employees may no longer be able to access corporate applications on their local WAN. Now you can maintain high performance and uptime across all branch applications with optimized SD-WAN throughout your network.

## READY TO EVOLVE

As branch and retail network evolve to 5G, Digi solutions adapt and effectively solve connectivity challenges in heavy traffic and noisy data environments. Integrate seamlessly with existing infrastructure by way of an agile road map for growth as requirements change over time.

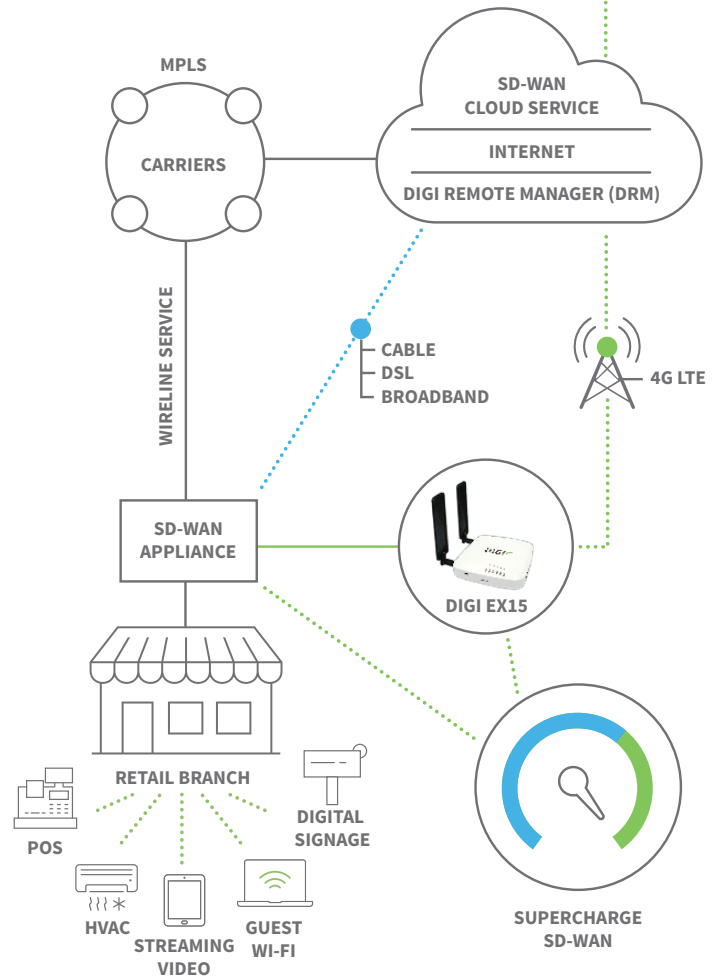

## BUILT-IN SECURITY

Protect your investment and prepare for what's next. Secure data and revenue streams, maximize uptime, monitor the network for identify threats and leverage smart systems that automatically address potential issues. Digi products feature a built-in Digi TrustFence® framework that augments device security with identity and data protection measures that can quickly adapt to new and evolving threats.

### SUPERCHARGE SD-WAN SPEED AND SECURITY WITH DIGI EX15

Digi EX15 and SD-WAN solutions boost speed, access and reliability across branch locations to eliminate downtime, simplify deployment and reduce overall cost. Ensure high performance connectivity and redundancy for all critical applications and devices with SD-WAN, DRM, optional Wi-Fi, remote out-of-band management and integrated network security.
