

# RealPort with Encryption

## Secure and protect critical serial data in transit

Digi RealPort with encryption is Microsoft Windows Hardware Quality Lab certified (WHQL).

*Digi RealPort® is the only COM port redirector that allows multiple connections to multiple ports over a single TCP/IP connection.*

It is now possible to communicate with serial devices outside of the direct vicinity of servers and PCs. Digi RealPort software provides a seamless connection to serial devices.

For optimal cybersecurity, the addition of encryption to the Digi RealPort solution allows for a secure connection between the PC-based application and the end serial device.

### Why RealPort with Encryption?

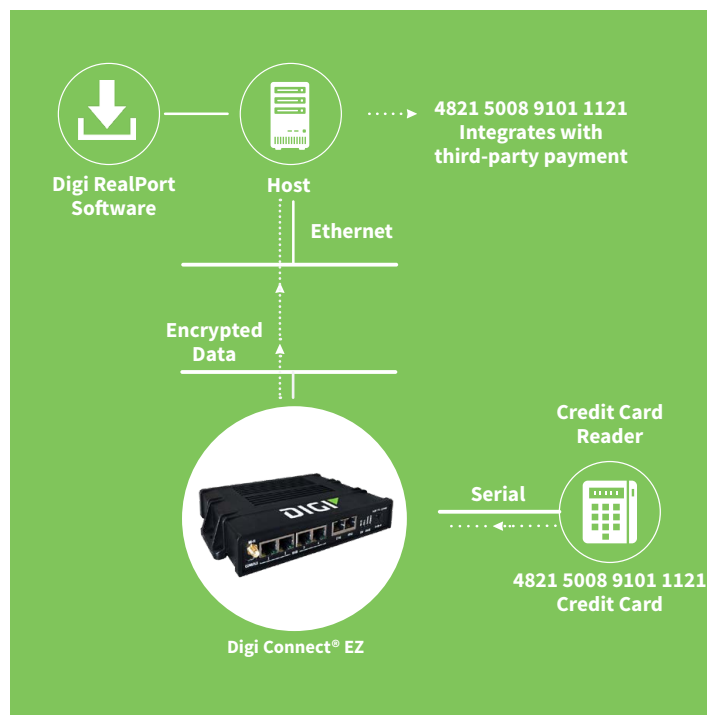

With a range of security features, Digi RealPort with encryption is ideal for financial, retail/point-of-sale and government applications.

- Drivers are available for a wide range of operating systems including Microsoft Windows 7, 8.1, and 10; Microsoft Windows Server 2012 R2, 2016, and 2019; and Linux
- TLS encryption prevents cyber threats over TCP/IP connections and ensures secure data transmission
- Connect more devices per server than any other COM port redirector based on processing power:
  - Up to 4096 ports with Windows-based systems

- Digi RealPort with encryption works with Digi Connect® EZ, Digi Connect® SP, Digi Connect® ES, Digi ConnectPort® LTS, and Digi PortServer® TS
- No cost to install, no per-seat or per-device licensing
