

3 Reasons for Theme Parks to Sync Serial Operations to the Cloud

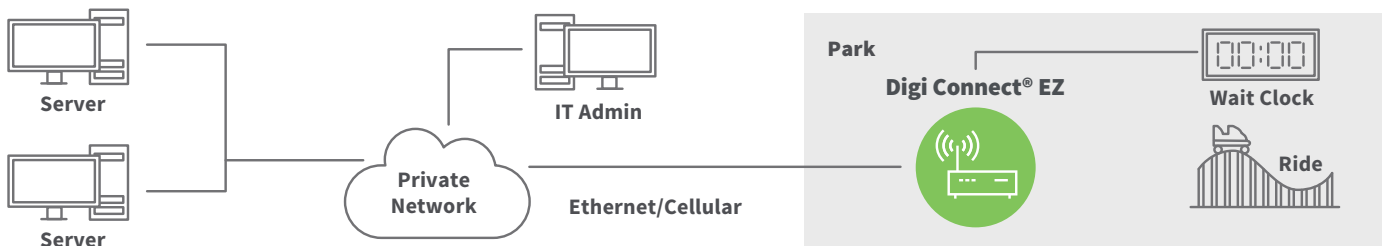

How to improve operations, costs and ROI with your serial device deployment.

Digi enabled the world's largest amusement park to reach a whole new level of guest experience — transforming their serial infrastructure into an efficient, cloud-based network. Through this innovative new model, [Digi Connect® EZ](#) created remarkable consistency for all guests eager to explore these popular attractions. Here are three benefits you can achieve:

- 1 Streamline Operations**
The Digi Connect EZ solution keeps wait-time clocks synchronized around the globe, from America to Tokyo and Paris, allowing you remote control of these clocks anytime, anywhere, from a secure source.
- 2 Eliminate Equipment in the Field**
By transitioning the wait-time clock technology to cloud computing, each attraction is now seamlessly managed while simplifying the equipment needed at each location and drastically reducing the costs for maintenance and support. This forward-thinking move reduces overhead and enhances amusement park operations for guests' ultimate convenience.
- 3 Improve Guest Experience**
Optimizing park operations with cloud-synced wait-time clocks creates a magical consistency for guests, ensuring real-time communication about their favorite attractions.

Use Case Example: Amusement Park Wait Time Clocks
