

Update 100k Student Learning Devices with Ease

Digi AnywhereUSB® Plus takes the load off of Wi-Fi networks.

Challenge

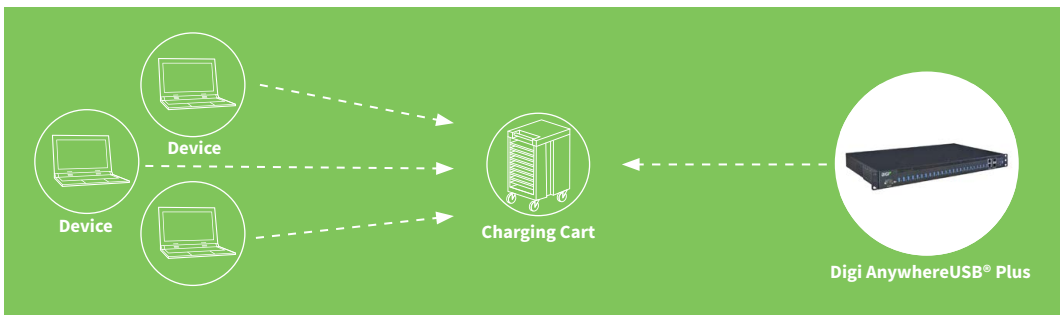

One of the largest school districts in the country, Fulton County School District in Atlanta, Georgia, needed a solution to update more than 100,000 computers on their network. Their existing system inadvertently excluded more than 20,000 devices and rendered their Wi-Fi network unusable when attempting updates.

Solution

Digi AnywhereUSB® Plus was placed in charging carts in each of the district's 108 buildings to provide fluid updates by simply connecting each device via USB to create isolated networks for updates. Once connected, all devices are visible through Digi Remote Manager® to push out the update while minimizing the impact on Wi-Fi.

Outcome

Fulton County Schools were able to set up a seamless solution for each of their 108 buildings to update the remaining 20,000 devices in less than two weeks. Students continued learning and teachers continued teaching.
