

# Well Water Management Control

## A Digi Industrial Control Product

Digi's well water system manages a wide range of motor sizes through on-board contactors or standard interface connections to variable frequency drives.

### Storage Tank and Well Levels

The system efficiently manages a wide range of storage tanks with a single sensor, without the need for floats. Monitor and control overflow, full, refill and empty levels based on defined thresholds. On the well, the system carefully monitors levels, protecting the well pump from running dry and automatically handling well recovery.

### Metering

The system supports all standard water meters and flow meters for tracking and reporting on usage. Usage data can be tracked by hour, day, month or any interval that is required.

### Local Intelligence and Control

All decisions to control, alert and alarm are made locally and communicated as needed. Digi's standalone system provides text message and e-mail alarms during critical situations, and detailed reporting for trending and analysis.

### Manage from SkyCloud

Digi's well management system is server-less. SkyCloud delivers up-to-the-minute details and an extensive history of all your assets to any web-enabled device.

# Well Water Management

## End-to-End Automation Control

- Key Features**
- Define the critical points of the system
  - Monitor and measure every critical point in the system; tanks, pumps, sensors and variable frequency drives
  - Autonomous control based on the critical levels and current status of system
  - Get text message and e-mail alarms and alerts on critical events
  - Automatic reporting to e-mail and SkyCloud for detailed analysis of your installation

## Measure, Monitor Control and Report

Digi's SkyCloud solution provides a comprehensive set of facilities for managing and monitoring the complete well water system. It manages, monitors and reports on the water well, well pump, storage tank and pressure pump. Communication over Ethernet, Wi-Fi or cellular provides critical alerts, usage data and reports delivered via e-mail, text message and to our SkyCloud web portal.

## Advanced Management Tools

Digi Industrial Controllers host a robust suite of tools to help you visualize your operation include extensive data logging, web-based indicators, gauges, graphs, and charts.
