1 INTRODUCTION

1.1 Outline

This document contains information regarding the configuration and use of syslog alerting.

All Digi TransPort products contain an event log. Whenever the Digi TransPort firmware does any significant operation an event is stored in the event log. Each event can be used to trigger an automatic email, SNMP trap, syslog alert or on products with GPRS/WCDMA an SMS message.

1.2 Assumptions

This guide has been written for use by technically competent personnel with a good understanding of the communications technologies used in the product, and of the requirements for their specific application.

This application note applies to;

Models shown: Digi TransPort WR21.

Other Compatible Models: All Digi TransPort products.

Firmware versions: 5.146 or newer.

Configuration This Application Note assumes that the Digi TransPort product has a PPP instance configured to connect to the Internet. The SIM in use on the router is activated correctly and supports sending SMS text messages.

Alerts will be configured to notify a mobile phone via SMS when the PPP connection on the WAN interface changes its UP/DOWN status.

1.3 Corrections

Requests for corrections or amendments to this application note are welcome and should be addressed to: tech.support@digicom.com

Requests for new application notes can be sent to the same address.

1.4 Version & Revision History

Version Number	Status
1.0	Published

2 CONFIGURATION

2.1 Configuring the Event Logcodes

First it is necessary to choose which events should trigger the SMS alerts.

The Event logcodes are configured from **Configuration - Alarms > Event Logcodes**. The list of events and trigger priorities is held in a file called logcodes.txt, when the event logcodes are changed the changes will not appear in the config.dao or logcodes.txt files, but are stored in the logcodes.dif file once the changes have been saved.

In order to send an SMS alert when a particular event occurs, the **Alarm Priority** for the event should be changed. There can be a number of reasons for each event. Each event can be configured with a global Alarm Priority which applies to all the reasons. It is also possible to override the global event Alarm Priority with a different Alarm Priority for each reason.

In the example below the Event 5 “%e %a down” will be used to trigger an SMS alert when PPP 1 is down and Event 153 “PPP 1 up” will be used to trigger an SMS alert when PPP 1 is up.

Navigate to **Configuration - Alarms > Event Logcodes**

Configuration - Alarms > Event Logcodes			
▶ Event Settings			
▼ Event Logcodes			
The logcodes describe the logged events. It is possible to configure each event / reason with a specific priority which can be used to control when that event / reason causes an alarm to be created.			
Event Description	Filter	Event Priority	Reasons
1 Power-up[%c]			1 Reboot command
			2 Reboot command via web
			3 Message shortage reboot
			4 Buffer shortage reboot
			5 Buffers excessive
			6 MsgLog
			7 High CPU usage
			8 Locked task %c
			9 Watchdog timeout
			10 Reboot command via iDigi Server
			11 Python script watchdog
			12 ESPAD request
			13 ASY transmit watchdog
2 Clear Event Log		5	
3 Reboot			
4 %e %a up		3	
5 %e %a down			1 Inactivity
			2 Remote disconnect
			3 LL disconnect
			4 Upper layer req
			5 Negotiation failure
			6 Retransmit failure
			7 DISC transmit
			8 TEI failure
			9 TEI lost
			10 Lower deactivated
			11 DISC receive
			12 B Channel clr
			13 Protocol failure
			14 PPP PING Failure

The following table describes the meaning of each column.

Parameter	Description
Event	A numerical value that represents the event
Description	The main description of the event.
Filter	If the Filter is ON, this event will not be logged.
Event Priority	The priority that the event currently has assigned. This is the alarm priority.
Reasons	The reason that the event is triggered.
Reason Priority	The priority that the reason currently has assigned. This is the alarm priority.

Click on the **%e %a down** event (event number 5).

Configuration - Alarms > Event Logcodes		
		1 Inactivity 2 Remote disconnect 3 LL disconnect 4 Upper layer req 5 Negotiation failure 2 6 Retransmit failure 6 7 DISC transmit 8 TEI failure 5 9 TEI lost 5 10 Lower deactivated 11 DISC receive 12 B Channel clr 13 Protocol failure 14 PPP PING Failure 15 PPP TX Link Failure 16 Call Req Timeout 17 LCP Echo Failure 18 Rebooting 19 Firewall Request 20 Timeband Off 21 Max up time 22 Max negotiation time 23 LL remote disconnect 24 WEB request 25 CLI request
5	%e %a down	

On the following page, configure the Alarm Priority.

Configuration - Alarms > Event Logcodes

▼ Event Logcodes

Event: %e %a down

☐ Do not log this event

Log Priority:

Alarm Priority: 

☐ Alarm Priority is dependent on the event being logged by Entity ☒ All ☐ instance

Priority only applies to

☐ PPP 0 ☐ PPP 1 ☐ PPP 2 ☐ PPP 3

☐ PPP 4 ☐ PPP 5 ☐ PPP 6 ☐ PPP 7

☐ Store a snapshot of the Traffic Analyser trace on the log drive

If this event creates an Email alarm

☐ Attach a snapshot of the Traffic Analyser trace

After this event: ☒ Leave the Analyser trace ☐ Freeze the Analyser trace ☐ Delete the Analyser trace

☐ Attach a snapshot of the Event Log

After this event: ☒ Leave the Event Log ☐ Delete the Event Log

Attachment List ID:

If this event creates a Syslog alarm, use

Syslog Priority:

Syslog Facility:

Parameter	Setting	Description
Alarm Priority	9	Change the Alarm Priority to 9, this will be used later.

Click Apply

Repeat the process for Event 153, 'PPP 1 up'.

Configuration - Alarms > Event Logcodes		
		View Event Logcodes
	9	Preferred route available
	10	All routes oos
152	PPP 0 up	
153	PPP 1 up	
154	PPP 2 up	
155	PPP 3 up	
156	PPP 4 up	
157	Low System Messages[%c]	0
		1 MsdLog

Configuration - Alarms > Event Logcodes

Save All Event Code Changes

Event: PPP 1 up

☐ Do not log this event

Log Priority:

Alarm Priority: 

☐ Alarm Priority is dependent on the event being logged by Entity ☒ All ☐ instance

Priority only applies to

☐ PPP 0 ☐ PPP 1 ☐ PPP 2 ☐ PPP 3

☐ PPP 4 ☐ PPP 5 ☐ PPP 6 ☐ PPP 7

☐ Store a snapshot of the Traffic Analyser trace on the log drive

If this event creates an Email alarm

☐ Attach a snapshot of the Traffic Analyser trace

After this event: ☒ Leave the Analyser trace ☐ Freeze the Analyser trace ☐ Delete the Analyser trace

☐ Attach a snapshot of the Event Log

After this event: ☒ Leave the Event Log ☐ Delete the Event Log

Attachment List ID:

If this event creates a Syslog alarm, use

Syslog Priority:

Syslog Facility:

Apply

Click Apply

Optional step

If required, alerts can be locked to a specific PPP interface by using the parameter **Alarm Priority is dependent on the event being logged by Entity** and configuring it as the PPP interface in use.

Configuration - Alarms > Event Logcodes

Event Settings

Event Logcodes

Event: %e %a down

☐ Do not log this event

Log Priority: 0

Alarm Priority: 9

☒ Alarm Priority is dependent on the event being logged by Entity PPP ☐ All ☒ instance 1

Priority only applies to

☐ PPP 0 ☐ PPP 1 ☐ PPP 2 ☐ PPP 3

☐ PPP 4 ☐ PPP 5 ☐ PPP 6 ☐ PPP 7

☐ Store a snapshot of the Traffic Analyser trace on the log drive

If this event creates an Email alarm

☐ Attach a snapshot of the Traffic Analyser trace

After this event: ☒ Leave the Analyser trace ☐ Freeze the Analyser trace ☐ Delete the Analyser trace

☐ Attach a snapshot of the Event Log

After this event: ☒ Leave the Event Log ☐ Delete the Event Log

Attachment List ID: 0

If this event creates a Syslog alarm, use

Syslog Priority: Alert

Syslog Facility: User

Apply

When all changed to the logcodes are complete, scroll up to the top of the screen, click 'Save All Event Code Changes' to save the changes to the logcodes.dif file.

Configuration - Alarms > Event Logcodes

Event Settings

Event Logcodes

☒ Save All Event Code Changes

The logcodes describe the logged events. It is possible to configure each event / reason with a specific priority which can be used to control when that event / reason causes an alarm to be created.

Event Description	Filter	Event Priority	Reasons	Reason Priority
			1 Reboot command	
			2 Reboot command via web	

2.2 Configuring the Event Settings

In the Event Settings, the delay after power up should be long enough for the router to detect and register on the mobile network, increase this if required.

The mobile number entered to send SMS alerts to should be in MSISDN format (for the UK this is no '+' symbol, country code included, leading zero removed).

The SMS alarm priority (Send SMS messages to <MSISDN> if the alarm priority is at least **<nn>**) should be set to a number the same or higher than the alarm priority configured for the event in the previous steps. If the alarm priority on the Event Settings page is set to 9, then every event (or event reason) with an alarm priority of 9=> will trigger an SMS alert. i.e. 9, 10, 11, 12....

The SMS template should be set to event.sms to use the included factory default template, custom templates can be created if required.

The maximum number of SMS per day should be configured to take into account the SMS charges on the tariff in use.

Navigate to **Configuration - Alarms > Event Settings**, expand the SMS section and configure the following parameters:

Configuration - Alarms > Event Settings

▼ Event Settings

Only log events with a log priority of at least 0

Do not log the following events:

After power up, wait 60 seconds before sending Emails, SNMP traps, SMS or Syslog messages

☐ Include event number in the event log and Email, SNMP traps, SMS or Syslog messages

► Email Notifications

► SNMP Traps

▼ SMS

Send SMS messages to 447801234567 if the alarm priority is at least 9

Send SMS messages to if the alarm priority is at least 0

Send SMS messages to if the alarm priority is at least 0

Use SMS template event.sms

Send a maximum of 20 SMS messages per day

0 SMS messages have been sent today

Parameter	Setting	Description
After power up, wait nn seconds before sending Emails, SNMP traps, SMS or Syslog messages	60	Delay in seconds, after power up, before alerts will be sent.
Send SMS messages to	Mobile phone number	Must be in MSISDN format
if the alarm priority is at least nn	9	Events with an alarm priority equal or greater than this number will trigger an alert.
Use SMS template	event.sms	The message template to use.
Send a maximum of nn SMS messages per day	20	The maximum number of alerts to send per day, this counter is reset at midnight.

After configuring these parameters, click Apply.

3 TESTING

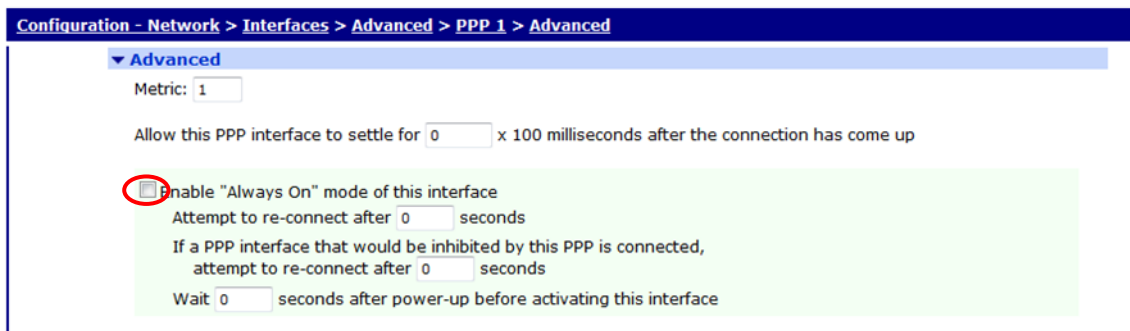

To test that the Digi TransPort is configured correctly and prove that SMS alerts work when PPP is down (PPP status has no effect on SMS functions), the PPP interface should be set so it does not try and reconnect automatically when deactivated. The PPP interface will then be disconnected, when the SMS is received, the PPP interface will be re-activated and a second SMS will be sent when PPP is up.

Only perform this test when connected to the router via the LAN because the WAN connection will now be disconnected and will require a manual re-connect.

Configure the PPP interface to not reconnect automatically.

Navigate to **Configuration - Network > Interfaces > Advanced > PPP 1 > Advanced**

Remove the tick from 'Enable "Always On" mode of this interface' and click Apply.

The screenshot shows the router's configuration page for the PPP 1 interface in the 'Advanced' tab. The breadcrumb trail at the top reads 'Configuration - Network > Interfaces > Advanced > PPP 1 > Advanced'. The 'Advanced' section is expanded, showing several settings. A red circle highlights the checkbox for 'Enable "Always On" mode of this interface', which is currently unchecked. Other settings include 'Metric' set to 1, 'Allow this PPP interface to settle for' 0 x 100 milliseconds, 'Attempt to re-connect after' 0 seconds, 'If a PPP interface that would be inhibited by this PPP is connected, attempt to re-connect after' 0 seconds, and 'Wait' 0 seconds after power-up before activating this interface.

Configuration - Network > Interfaces > Advanced > PPP 1 > Advanced

▼ Advanced

Metric: 1

Allow this PPP interface to settle for 0 x 100 milliseconds after the connection has come up

☐ Enable "Always On" mode of this interface

Attempt to re-connect after 0 seconds

If a PPP interface that would be inhibited by this PPP is connected, attempt to re-connect after 0 seconds

Wait 0 seconds after power-up before activating this interface

Navigate to **Management - Connections > PPP Connections > PPP 1** and click on **Drop Link**. Note that the connection to the internet will disconnect.

Management - Connections > PPP Connections > PPP 1

IP Connections

PPP Connections

PPP 0

PPP 1 - W-WAN

Raise Link Drop Link

Uptime: 4 Hrs 52 Mins 17 Seconds

Option	Local	Remote
MRU:	1500	1500
ACCM:	0x0	0x0
VJ Compression:	OFF	OFF

Link Active With Entity: ASY 4

IP Address: 10.121.197.222

DNS Server IP Address: 88.82.13.12

Secondary DNS Server IP Address: 88.82.13.12

Outgoing Call To: *98*1#

When the PPP link is dropped, this will create an event in the event log and an SMS will be sent.

The events in **Management - Event Log** will look similar to this, the event that triggered the SMS is shown in red for clarification (note the reason for PPP 1 down is CLI request, this means manually disconnected by a logged in user), colouring of text in the actual event log does not happen.

```
10:11:29, 14 Mar 2013, SMS send, Sent OK
10:11:24, 14 Mar 2013, Modem disconnected on asy 4, Normal Breakdown
10:11:21, 14 Mar 2013, Default Route 0 Out Of Service, Activation
10:11:21, 14 Mar 2013, PPP 1 Out Of Service, Activation
10:11:21, 14 Mar 2013, PPP 1 down, CLI request
10:11:10, 14 Mar 2013, Par change by username, ppp 1 autoassert to 0
```

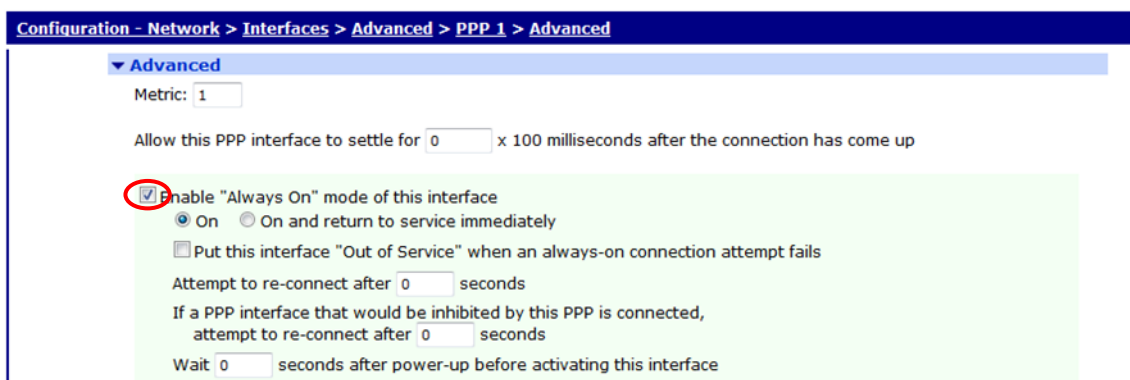

The received SMS is shown here:

Configure the PPP interface to reconnect automatically.

Navigate to **Configuration - Network > Interfaces > Advanced > PPP 1 > Advanced**

Insert the tick in 'Enable "Always On" mode of this interface' and click Apply.

After a few seconds the PPP interface will reconnect, when PPP 1 is up an SMS will be sent. This can be seen in the eventlog.

10:31:14, 14 Mar 2013, SMS send, Sent OK

10:30:54, 14 Mar 2013, Default Route 0 Available, Activation

10:30:54, 14 Mar 2013, PPP 1 Available, Activation

10:30:54, 14 Mar 2013, PPP 1 up

10:30:52, 14 Mar 2013, PPP 1 Start IPCP

10:30:52, 14 Mar 2013, PPP 1 Start AUTHENTICATE

10:30:52, 14 Mar 2013, PPP 1 Start LCP

10:30:51, 14 Mar 2013, PPP 1 Start

10:30:51, 14 Mar 2013, Modem connected on asy 4

10:30:50, 14 Mar 2013, Modem dialing on asy 4 #:*98*1#

10:30:44, 14 Mar 2013, Par change by username, ppp 1 autoassert to 1

The received SMS is shown here:

The number of SMS messages sent by the router since midnight can be checked by navigating to **Configuration - Alarms > Event Settings**, the number of messages sent is shown in the **SMS** section. This is the total number of alerts sent to all configured mobile numbers.

Configuration - Alarms > Event Settings

▼ Event Settings

Only log events with a log priority of at least 0

Do not log the following events:

After power up, wait 60 seconds before sending Emails, SNMP traps, SMS or Syslog messages

☐ Include event number in the event log and Email, SNMP traps, SMS or Syslog messages

► Email Notifications
