

Seamless Data Transmission Over TCP/IP Solution

Digi AnywhereUSB® 2 Plus provides a stable and reliable solution for complex industrial operations

Challenge

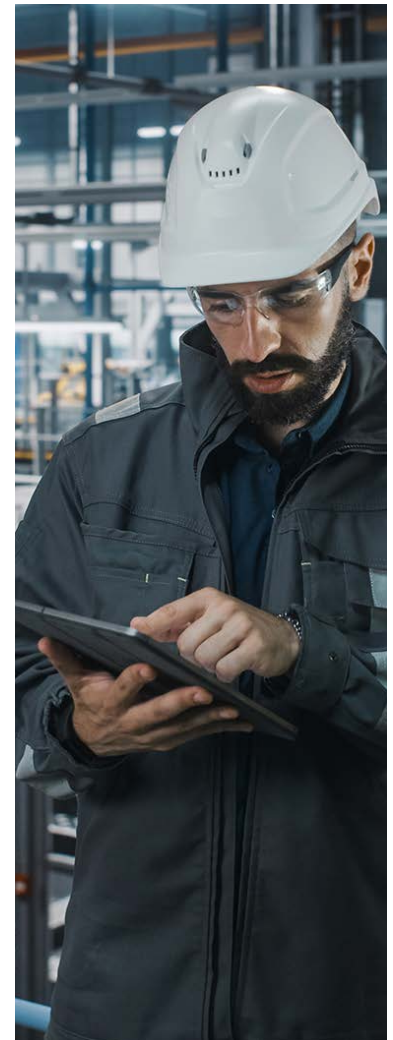

A leading industrial company was in search of a stable, reliable solution to collect data from various serial devices at an installation site and transmit to a central server over TCP/IP on a continuous basis. The installation site involved a special USB/serial hub to manage multiple serial connections, adding complexity to the setup.

Solution

The company's USB/serial hub was connected to [Digi AnywhereUSB 2 Plus](#) to allow seamless data transmission over TCP/IP and securely manage all serial data via USB devices from anywhere. It also offered robust performance and compatibility with the special USB/serial hub, facilitating the seamless integration of serial data collection and transmission to the server.

Outcome

Digi AnywhereUSB 2 Plus has proven to be a 24/7 stable solution to keep critical data collected and transmitted without interruption. This solution is just one part of the broader technology initiatives Digi has established. Together, Digi's high-quality products and solutions play a key role in ensuring efficient operations.
